$\mathbb{N}, \mathbb{R}$
$\aleph_0$
ω
(a, b)
$\{\}$
$f : A \to B$
$A \times B$
$R \subseteq A \times B$

从“关系”的角度理解“函数”

$$f(x) = 2x + 1$$

“函数” 也是 “关系”

$$\{\ldots, (-2, -3), (-1, -1), (0, 1), (1, 3), \ldots\}$$

$$(x^2+y^2)^2+4ax(x^2+y^2)-4a^2y^2=0$$

“函数”不允许“一对多”

Functions

Functions

PROOF!

Definition of Functions

$$R \subseteq A \times B$$

is a *relation* from A to B

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \ \exists!\ b \in B \ (a, b) \in f.$$

For Proof:

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \; \exists! \; b \in B \; (a, b) \in f.$$

For Proof:

$$\forall a \in A$$

$$\forall a \in A \; \exists b \in B \; (a, b) \in f$$

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \; \exists! \; b \in B \; (a, b) \in f.$$

For Proof:

$$\forall a \in A$$

$$\forall a \in A \; \exists b \in B \; (a, b) \in f$$

$$\exists! b \; \in B$$

$$\forall b, b' \in B \; (a, b) \in f \wedge (a, b') \in f \rightarrow b = b'$$

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \ \exists!\ b \in B \ (a, b) \in f.$$

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \ \exists!\, b \in B \ (a, b) \in f.$$

$$f : A \to B$$

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \ \exists!\, b \in B \ (a, b) \in f.$$

$$f : A \to B$$

$$\mathrm{dom}(f) = A \qquad \mathrm{cod}(f) = B$$

$$\mathrm{ran}(f) = f(A) \subseteq B$$

Definition (Function)

$f \subseteq A \times B$ is a *function* from A to B if

$$\forall a \in A \ \exists!\, b \in B \ (a, b) \in f.$$

$$f : A \to B$$

$$\mathrm{dom}(f) = A \qquad \mathrm{cod}(f) = B$$

$$\mathrm{ran}(f) = f(A) \subseteq B$$

$$f : a \mapsto b$$

$$f(a) = b$$

$$I_X : X \to X$$

X 上的恒等函数

$$\forall x \in X \ I_X(x) = x$$

$$f(x) = \sum_{n=0}^{\infty} a^n \cos(b^n \pi x)$$

$$0 < a < 1,\ b \text{ is a positive odd integer},\ ab > 1 + \frac{3}{2}\pi$$

$$f(x) = \sum_{n=0}^{\infty} a^n \cos(b^n \pi x)$$

$$0 < a < 1,\ b \text{ is a positive odd integer},\ ab > 1 + \frac{3}{2}\pi$$

Weierstrass Function (1872)

“处处连续, 但处处不可导”

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$|X| = x \quad |Y| = y, \qquad |Y^X| =$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$|X| = x \quad |Y| = y, \qquad |Y^X| = y^x$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$|X| = x \quad |Y| = y, \qquad |Y^X| = y^x$$

$$\mathcal{P}(X) = 2^X = \{0, 1\}^X$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$\forall Y \; Y^{\emptyset} =$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$\forall Y \; Y^{\emptyset} = \{\emptyset\}$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$\forall Y \; Y^{\emptyset} = \{\emptyset\}$$

$$\emptyset^{\emptyset} = \{\emptyset\}$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$\forall Y \; Y^{\emptyset} = \{\emptyset\}$$

$$\emptyset^{\emptyset} = \{\emptyset\}$$

$$\forall X \neq \emptyset \; \emptyset^X =$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

$$\forall Y \; Y^{\emptyset} = \{\emptyset\}$$

$$\emptyset^{\emptyset} = \{\emptyset\}$$

$$\forall X \neq \emptyset \; \emptyset^X = \emptyset$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Theorem

There is no set consisting of all functions.

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Theorem

There is no set consisting of all functions.

Suppose by contradiction that A is the set of all functions.

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Theorem

There is no set consisting of all functions.

Suppose by contradiction that A is the set of all functions.

For every set X, there exists a function $I_{\{X\}} : \{X\} \to \{X\}$.

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Theorem

There is no set consisting of all functions.

Suppose by contradiction that A is the set of all functions.

For every set X, there exists a function $I_{\{X\}} : \{X\} \to \{X\}$.

$$\bigcup_{I_X \in A} \mathrm{dom}(I_X)$$

Definition (Y^X)

The *set* of all functions from X to Y:

$$Y^X = \{f \mid f : X \to Y\}$$

Theorem

There is no set consisting of all functions.

Suppose by contradiction that A is the set of all functions.

For every set X, there exists a function $I_{\{X\}} : \{X\} \to \{X\}$.

$\bigcup_{I_X \in A} \mathrm{dom}(I_X)$ would be the universe that does not exist!

Functions as Sets

Theorem (函数的外延性原理 (The Principle of Functional Extensionality))

$$f, g \ \textit{are functions}:$$

$$f = g \iff \mathrm{dom}(f) = \mathrm{dom}(g) \wedge \big(\forall x \in \mathrm{dom}(f)\ f(x) = g(x)\big)$$

Theorem (函数的外延性原理 (The Principle of Functional Extensionality))

$$f, g \text{ are functions}:$$

$$f = g \iff \mathrm{dom}(f) = \mathrm{dom}(g) \wedge \big(\forall x \in \mathrm{dom}(f)\ f(x) = g(x)\big)$$

$$f = g \iff \forall (a, b)\ ((a, b) \in f \leftrightarrow (a, b) \in g).$$

Theorem (函数的外延性原理 (The Principle of Functional Extensionality))

$$f, g \text{ are functions}:$$

$$f = g \iff \mathrm{dom}(f) = \mathrm{dom}(g) \wedge (\forall x \in \mathrm{dom}(f)\ f(x) = g(x))$$

$$f = g \iff \forall (a, b)\ ((a, b) \in f \leftrightarrow (a, b) \in g).$$

It may be that $\mathrm{cod}(f) \neq \mathrm{cod}(g)$.

$$f : A \to B \qquad g : C \to D$$

Q : Is $f \cap g$ a function?

$$f : A \to B \qquad g : C \to D$$

Q : Is $f \cap g$ a function?

Theorem (Intersection of Functions)

$$E = \{x \mid x \in A \cap C \wedge f(x) = g(x)\}$$

$$f \cap g = \{(x, y) \mid x \in E, y = f(x) = g(x)\}$$

$$f : A \to B \qquad g : C \to D$$

Q : Is $f \cup g$ a function?

$$f : A \to B \qquad g : C \to D$$

Q : Is $f \cup g$ a function?

Theorem (Union of Functions)

$$f \cup g : (A \cup C) \to (B \cup D) \iff \forall x \in \mathrm{dom}(f) \cap \mathrm{dom}(g)\ f(x) = g(x)$$

$$f : A \to B \qquad g : C \to D$$

Q : Is $f \cup g$ a function?

Theorem (Union of Functions)

$$f \cup g : (A \cup C) \to (B \cup D) \iff \forall x \in \mathrm{dom}(f) \cap \mathrm{dom}(g)\ f(x) = g(x)$$

$$f : \mathbb{Q} \to \mathbb{R}$$

$$f(x) = \begin{cases} x+1, & \text{if } x \in 2\mathbb{Z} \\ x-1, & \text{if } x \in 3\mathbb{Z} \\ 2, & \text{otherwise} \end{cases}$$

$$f : \mathcal{P}(\mathbb{R}) \to \mathbb{Z}$$

$$f(A) = \begin{cases} \min(A \cap \mathbb{N}) & \text{if } A \cap \mathbb{N} \neq \emptyset \\ -1 & \text{if } A \cap \mathbb{N} = \emptyset \end{cases}$$

$$f : \mathcal{P}(\mathbb{R}) \to \mathbb{Z}$$

$$f(A) = \begin{cases} \min(A \cap \mathbb{N}) & \text{if } A \cap \mathbb{N} \neq \emptyset \\ -1 & \text{if } A \cap \mathbb{N} = \emptyset \end{cases}$$

$$\mathrm{dom}(f) \cap \mathrm{dom}(g) = \emptyset$$

By the *Well-Ordering Principle* of $\mathbb{N}$

$$D : \mathbb{R} \to \mathbb{R}$$

$$D(x) = \begin{cases} 1 & \text{if } x \in \mathbb{Q} \\ 0 & \text{if } x \in \mathbb{R} \setminus \mathbb{Q} \end{cases}$$

Dirichlet Function

“处处不连续”

Classifying Functions (*-jectivity*)

Definition (Injective (one-to-one; 1-1) 单射函数)

$$f : A \to B$$

$$\forall a_1, a_2 \in A \; a_1 \neq a_2 \to f(a_1) \neq f(a_2)$$

Definition (Injective (one-to-one; 1-1) 单射函数)

$$f : A \to B \qquad f : A \rightarrowtail B$$

$$\forall a_1, a_2 \in A \; a_1 \neq a_2 \to f(a_1) \neq f(a_2)$$

Definition (Injective (one-to-one; 1-1) 单射函数)

$$f : A \to B \qquad f : A \rightarrowtail B$$

$$\forall a_1, a_2 \in A \; a_1 \neq a_2 \to f(a_1) \neq f(a_2)$$

For Proof:

- To prove that f *is* 1-1:

$$\forall a_1, a_2 \in A \; f(a_1) = f(a_2) \to a_1 = a_2$$

Definition (Injective (one-to-one; 1-1) 单射函数)

$$f : A \to B \qquad f : A \rightarrowtail B$$

$$\forall a_1, a_2 \in A \; a_1 \neq a_2 \to f(a_1) \neq f(a_2)$$

For Proof:

- To prove that f *is* 1-1:

$$\forall a_1, a_2 \in A \; f(a_1) = f(a_2) \to a_1 = a_2$$

- To show that f *is not* 1-1:

$$\exists a_1, a_2 \in A \; a_1 \neq a_2 \wedge f(a_1) = f(a_2)$$

Definition (Surjective (onto) 满射函数)

$$f : A \to B$$

$$\mathrm{ran}(f) = B$$

Definition (Surjective (onto) 满射函数)

$$f : A \to B \qquad f : A \twoheadrightarrow B$$

$$\mathrm{ran}(f) = B$$

Definition (Surjective (onto) 满射函数)

$$f : A \to B \qquad f : A \twoheadrightarrow B$$

$$\mathrm{ran}(f) = B$$

For Proof:

- To prove that f *is* onto:

$$\forall b \in B \ (\exists a \in A \ f(a) = b)$$

Definition (Surjective (onto) 满射函数)

$$f : A \to B \qquad f : A \twoheadrightarrow B$$

$$\mathrm{ran}(f) = B$$

For Proof:

- To prove that f *is* onto:

$$\forall b \in B \ (\exists a \in A \ f(a) = b)$$

- To show that f *is not* onto:

$$\exists b \in B \ (\forall a \in A \ f(a) \neq b)$$

Definition (Bijective (one-to-one correspondence) 双射; 一一对应)

$$f : A \to B$$

1-1 & onto

Definition (Bijective (one-to-one correspondence) 双射; 一一对应)

$$f : A \to B \qquad f : A \xleftrightarrow[onto]{1-1} B$$

1-1 & onto

$$f : \mathbb{Z} \to \mathbb{N}, \qquad f(x) = x^2 + 1$$

$$f : \mathbb{Z} \to \mathbb{N}, \qquad f(x) = x^2 + 1$$

$$f : \mathbb{N} \to \mathbb{Q}, \qquad f(x) = \frac{1}{x}$$

$$f : \mathbb{Z} \to \mathbb{N}, \qquad f(x) = x^2 + 1$$

$$f : \mathbb{N} \to \mathbb{Q}, \qquad f(x) = \frac{1}{x}$$

$$f : \mathbb{N} \to \mathbb{N}, \qquad f(x) = 2^x$$

$$f : \mathbb{Z} \to \mathbb{N}, \qquad f(x) = x^2 + 1$$

$$f : \mathbb{N} \to \mathbb{Q}, \qquad f(x) = \frac{1}{x}$$

$$f : \mathbb{N} \to \mathbb{N}, \qquad f(x) = 2^x$$

$$f : \mathbb{Z} \times \mathbb{N} \to \mathbb{Q}, \qquad f(z, n) = \frac{z}{n+1}$$

$$f : \mathbb{R}^2 \to \mathbb{R}^2, \qquad f(x, y) = (x + 1, y + 1)$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, *then* f *is* *not* *onto.*

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Proof. Let A be a set and let $f : A \to 2^A$. To show that f is not onto, we must find a $B \in 2^A$ (i.e., $B \subseteq A$) for which there is no $a \in A$ with $f(a) = B$. In other words, B is a set that f "misses." To this end, let

$$B = \{x \in A : x \notin f(x)\}.$$

We claim there is no $a \in A$ with $f(a) = B$.

Suppose, for the sake of contradiction, there is an $a \in A$ such that $f(a) = B$. We ponder: Is $a \in B$?

- If $a \in B$, then, since $B = f(a)$, we have $a \in f(a)$. So, by definition of B, $a \notin f(a)$; that is, $a \notin B$.$\Rightarrow\Leftarrow$
- If $a \notin B = f(a)$, then, by definition of B, $a \in B$.$\Rightarrow\Leftarrow$

Both $a \in B$ and $a \notin B$ lead to contradictions, and hence our supposition [there is an $a \in A$ with $f(a) = B$] is false, and therefore f is not onto. ■

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Understanding this problem:

$$A = \{1, 2, 3\}$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Understanding this problem:

$$A = \{1, 2, 3\}$$

$$2^A = \mathcal{P}(A) = \Big\{\emptyset, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{2, 3\}, \{1, 2, 3\}\Big\}$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Understanding this problem:

$$A = \{1, 2, 3\}$$

$$2^A = \mathcal{P}(A) = \Big\{\emptyset, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{2, 3\}, \{1, 2, 3\}\Big\}$$

Onto

$$\forall B \in 2^A \left(\exists a \in A \; f(a) = B\right)$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

Understanding this problem:

$$A = \{1, 2, 3\}$$

$$2^A = \mathcal{P}(A) = \Big\{\emptyset, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{2, 3\}, \{1, 2, 3\}\Big\}$$

Onto

$$\forall B \in 2^A \left(\exists a \in A \; f(a) = B\right)$$

Not Onto

$$\exists B \in 2^A \left(\forall a \in A \; f(a) \neq B\right)$$

$$f(1) = \{1, 2\}$$
$$f(2) = \{1, 3\}$$
$$f(3) = \emptyset$$

$$f(1) = \{1, 2\}$$
$$f(2) = \{1, 3\}$$
$$f(3) = \emptyset$$

$$B = \{2, 3\}$$

$$f(1) = \{1, 2\}$$
$$f(2) = \{1, 3\}$$
$$f(3) = \emptyset$$

$$B = \{2, 3\}$$

$$B = \{x \mid x \in A \wedge x \notin f(x)\} = \{2, 3\}$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

$$\exists B \in 2^A \left(\forall a \in A \; f(a) \neq B\right)$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

$$\exists B \in 2^A \left(\forall a \in A\ f(a) \neq B\right)$$

- Constructive proof ($\exists$):

$$B = \{a \in A \mid a \notin f(a)\}$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

$$\exists B \in 2^A \left(\forall a \in A \; f(a) \neq B\right)$$

- Constructive proof ($\exists$):

$$B = \{a \in A \mid a \notin f(a)\}$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

$$\exists B \in 2^A \left(\forall a \in A\ f(a) \neq B\right)$$

- Constructive proof ($\exists$):

$$B = \{a \in A \mid a \notin f(a)\}$$

- By contradiction ($\forall$):

$$\exists a \in A\ f(a) = B.$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

$$\exists B \in 2^A \left(\forall a \in A\ f(a) \neq B\right)$$

- Constructive proof ($\exists$):

$$B = \{a \in A \mid a \notin f(a)\}$$

- By contradiction ($\forall$):

$$\exists a \in A\ f(a) = B.$$

$$Q : a \in B?$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, then f is not onto.

$$\exists B \in 2^A \left(\forall a \in A\ f(a) \neq B\right)$$

- Constructive proof ($\exists$):

$$B = \{a \in A \mid a \notin f(a)\}$$

- By contradiction ($\forall$):

$$\exists a \in A\ f(a) = B.$$

$$Q : a \in B?$$

$$a \in B \iff a \notin B$$

Theorem (Cantor Theorem)

If $f : A \to 2^A$, *then* f *is* *not* *onto.*

Functions as Relations

$$f|_X \qquad f(A) \qquad f^{-1}(B) \qquad f \circ g$$

Definition (Restriction)

The *restriction* of a function $f : A \to B$ to X is the function:

$$f|_X = \{(x, y) \in f \mid x \in X\}$$

Definition (Restriction)

The *restriction* of a function $f : A \to B$ to X is the function:

$$f|_X = \{(x, y) \in f \mid x \in X\}$$

It is unnecessary that $X \subseteq A$, though it is usually the case.

Definition (Restriction)

The *restriction* of a function $f : A \to B$ to X is the function:

$$f|_X = \{(x, y) \in f \mid x \in X\}$$

It is unnecessary that $X \subseteq A$, though it is usually the case.

$$f|_X : A \cap X \to B$$

$$\forall x \in A \cap X \; f|_X(x) = f(x)$$

Definition (像 (Image))

The *image* of X under a function $f : A \to B$ is the set

$$f(X) = \{y \mid \exists x \in X \ (x, y) \in f\}$$

Definition (像 (Image))

The *image* of X under a function $f : A \to B$ is the set

$$f(X) = \{y \mid \exists x \in X \ (x, y) \in f\}$$

It is unnecessary that $X \subseteq \mathrm{dom}(f) = A$, though it is usually the case.

Definition (像 (Image))

The *image* of X under a function $f : A \to B$ is the set

$$f(X) = \{y \mid \exists x \in X \ (x, y) \in f\}$$

It is unnecessary that $X \subseteq \mathrm{dom}(f) = A$, though it is usually the case.

$$f(X) = f(A \cap X)$$

Definition (像 (Image))

The *image* of X under a function $f : A \to B$ is the set

$$f(X) = \{y \mid \exists x \in X \ (x, y) \in f\}$$

It is unnecessary that $X \subseteq \mathrm{dom}(f) = A$, though it is usually the case.

$$f(X) = f(A \cap X)$$

$$f(\{a\}) = \{b\} \quad \text{简记为} \quad f(a) = b$$

Definition (像 (Image))

The *image* of X under a function $f : A \to B$ is the set

$$f(X) = \{y \mid \exists x \in X \ (x, y) \in f\}$$

$$\boxed{y \in f(X) \iff \exists x \in X \ y = f(x)}$$

Definition (逆像 (Inverse Image))

The *inverse image* of Y under a function $f : A \to B$ is the set

$$f^{-1}(Y) = \{x \mid \exists y \in Y \ (x, y) \in f\}$$

Definition (逆像 (Inverse Image))

The *inverse image* of Y under a function $f : A \to B$ is the set

$$f^{-1}(Y) = \{x \mid \exists y \in Y \ (x, y) \in f\}$$

It is unnecessary that $Y \subseteq \mathrm{ran}(f)$, though it is usually the case.

Definition (逆像 (Inverse Image))

The *inverse image* of Y under a function $f : A \to B$ is the set

$$f^{-1}(Y) = \{x \mid \exists y \in Y \ (x, y) \in f\}$$

It is unnecessary that $Y \subseteq \mathrm{ran}(f)$, though it is usually the case.

$$f^{-1}(Y) = f^{-1}(Y \cap \mathrm{ran}(f))$$

Definition (逆像 (Inverse Image))

The *inverse image* of Y under a function $f : A \to B$ is the set

$$f^{-1}(Y) = \{x \mid \exists y \in Y \ (x, y) \in f\}$$

It is unnecessary that $Y \subseteq \mathrm{ran}(f)$, though it is usually the case.

$$f^{-1}(Y) = f^{-1}(Y \cap \mathrm{ran}(f))$$

$f^{-1}(\{b\}) = \{a\}$ 可简记为 $f^{-1}(b) = \{a\}$ 不能简记为 $f^{-1}(b) = a$

Definition (逆像 (Inverse Image))

The *inverse image* of Y under a function $f : A \to B$ is the set

$$f^{-1}(Y) = \{x \mid \exists y \in Y \ (x, y) \in f\}$$

$$\boxed{x \in f^{-1}(Y) \iff f(x) \in Y}$$

$$\boxed{y \in f(X) \iff \exists x \in X \; y = f(x)}$$

Hear, forget.
See, remember.
Do, understand.

$$\boxed{x \in f^{-1}(Y) \iff f(x) \in Y}$$

Inverse Functions

$$f : A \to B$$

What is the condition for f^{-1} to be a function from B to A?

$$f^{-1} : B \to A$$

Definition (反函数 (Inverse Function))

Let $f : A \to B$ be a function.

The *inverse* of f is a function from B to A, denoted $f^{-1} : B \to A$ if f is bijective.

Definition (反函数 (Inverse Function))

Let $f : A \to B$ be a function.

The *inverse* of f is a function from B to A, denoted $f^{-1} : B \to A$ if f is bijective.

We call f^{-1} the *inverse function* of f.

Definition (反函数 (Inverse Function))

Let $f : A \to B$ be a function.

The *inverse* of f is a function from B to A, denoted $f^{-1} : B \to A$ if f is bijective.

We call f^{-1} the *inverse function* of f.

$$f \text{ is bijective} : \boxed{f(x) = y \iff f^{-1}(y) = x}$$

Theorem

Suppose that $f : A \to B$ *is bijective. Then, its inverse function* $f^{-1} : B \to A$ *is unique.*

Theorem

Suppose that $f : A \to B$ is bijective. Then, its inverse function $f^{-1} : B \to A$ is unique.

By Contradiction

Theorem

Suppose that $f : A \to B$ is bijective. Then, its inverse function $f^{-1} : B \to A$ is unique.

By Contradiction

$$f(x) = y \iff f^{-1}(y) = x$$

$$f(x) = y \iff g(y) = x$$

Theorem

Suppose that $f : A \to B$ is bijective. Then, its inverse function $f^{-1} : B \to A$ is unique.

By Contradiction

$$f(x) = y \iff f^{-1}(y) = x$$

$$f(x) = y \iff g(y) = x$$

$$\forall y \in B \; f^{-1}(y) = x = g(y)$$

$$f(x) = (2x + 8)^3$$

$$f(x) = (2x + 8)^3$$

$$f^{-1}(y) = \frac{\sqrt[3]{y} - 8}{2}$$

$$f(x) = (2x+8)^3$$

$$f^{-1}(y) = \frac{\sqrt[3]{y} - 8}{2}$$

$$f(x) = x - \sin x$$

$$f(x) = (2x+8)^3$$

$$f^{-1}(y) = \frac{\sqrt[3]{y} - 8}{2}$$

$$f(x) = x - \sin x$$

$$f^{-1}(y) = \sum_{n=1}^{\infty} \frac{y^{n/3}}{n!} \lim_{\theta \to 0} \left(\frac{\mathrm{d}^{\,n-1}}{\mathrm{d}\theta^{\,n-1}} \left(\frac{\theta}{\sqrt[3]{\theta - \sin(\theta)}} \right)^n \right)$$

Theorem

$$\boxed{f : A \to B \ \textit{is bijective}}$$

(i) $f \circ f^{-1} = I_B$

(ii) $f^{-1} \circ f = I_A$

(iii) f^{-1} *is bijective*

(iv) $g : B \to A \wedge f \circ g = I_B \implies g = f^{-1}$

(v) $g : B \to A \wedge g \circ f = I_A \implies g = f^{-1}$

Theorem

$$\boxed{f : A \to B \ \textit{is bijective}}$$

(i) $f \circ f^{-1} = I_B$

(ii) $f^{-1} \circ f = I_A$

(iii) f^{-1} *is bijective*

(iv) $g : B \to A \wedge f \circ g = I_B \implies g = f^{-1}$

(v) $g : B \to A \wedge g \circ f = I_A \implies g = f^{-1}$

Providing ways to check/find f^{-1}

Theorem

$$f : A \to B \ \textit{is bijective}$$

$$f \circ f^{-1} = I_B$$

Theorem

$$f : A \to B \ \textit{is bijective}$$

$$f \circ f^{-1} = I_B$$

对任意 $b \in B$,

$$(f \circ f^{-1})(b) = f(f^{-1}(b))$$

Theorem

$$f : A \to B \ \textit{is bijective}$$

$$f \circ f^{-1} = I_B$$

对任意 $b \in B$,

$$(f \circ f^{-1})(b) = f(f^{-1}(b))$$

Suppose that $a = f^{-1}(b)$

$$\boxed{a = f^{-1}(b) \iff f(a) = b}$$

Theorem

$$f : A \to B \ \textit{is bijective}$$

$$f \circ f^{-1} = I_B$$

对任意 $b \in B$,

$$(f \circ f^{-1})(b) = f(f^{-1}(b))$$

$$\text{Suppose that } a = f^{-1}(b)$$

$$\boxed{a = f^{-1}(b) \iff f(a) = b}$$

$$(f \circ f^{-1})(b) = f(f^{-1}(b)) = f(a) = b$$

Theorem

$$f : A \to B \ \textit{is bijective}$$

$$g : B \to A \wedge f \circ g = I_B \implies g = f^{-1}$$

Theorem

$$f : A \to B \ \textit{is bijective}$$

$$g : B \to A \wedge f \circ g = I_B \implies g = f^{-1}$$

$$g = (f^{-1} \circ f) \circ g = f^{-1} \circ (f \circ g) = f^{-1} \circ I_B = f^{-1}$$

Theorem (Inverse of Composition)

$$\textit{Both } f : A \to B \textit{ and } g : B \to C \textit{ are bijective}$$

(i) $g \circ f$ *is bijective*

(ii) $(g \circ f)^{-1} = f^{-1} \circ g^{-1}$

Theorem (Inverse of Composition)

$$\textit{Both } f : A \to B \textit{ and } g : B \to C \textit{ are bijective}$$

(i) $g \circ f$ *is bijective*

(ii) $(g \circ f)^{-1} = f^{-1} \circ g^{-1}$

$$f(x) = 3x \qquad g(x) = x + 5$$

Theorem (Inverse of Composition)

$$\textit{Both } f : A \to B \textit{ and } g : B \to C \textit{ are bijective}$$

(i) $g \circ f$ *is bijective*

(ii) $(g \circ f)^{-1} = f^{-1} \circ g^{-1}$

$$f(x) = 3x \qquad g(x) = x + 5$$

$$(g \circ f)(x) = 3x + 5 \qquad (g \circ f)^{-1}(x) = \frac{x-5}{3}$$

Theorem (Inverse of Composition)

$$\textit{Both } f : A \to B \textit{ and } g : B \to C \textit{ are bijective}$$

(i) $g \circ f$ *is bijective*

(ii) $(g \circ f)^{-1} = f^{-1} \circ g^{-1}$

$$f(x) = 3x \qquad g(x) = x + 5$$

$$(g \circ f)(x) = 3x + 5 \qquad (g \circ f)^{-1}(x) = \frac{x-5}{3}$$

Proof for (ii).

Theorem (Inverse of Composition)

$$\textit{Both } f : A \to B \textit{ and } g : B \to C \textit{ are bijective}$$

(i) $g \circ f$ *is bijective*

(ii) $(g \circ f)^{-1} = f^{-1} \circ g^{-1}$

$$f(x) = 3x \qquad g(x) = x + 5$$

$$(g \circ f)(x) = 3x + 5 \qquad (g \circ f)^{-1}(x) = \frac{x-5}{3}$$

Proof for (ii).

It suffices to check either one of the following identities:

$$(f^{-1} \circ g^{-1}) \circ (g \circ f) = I_A$$

$$(g \circ f) \circ (f^{-1} \circ g^{-1}) = I_C$$

Theorem

$$f : A \to B \quad g : B \to A$$

(iii) $f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$

Theorem

$$f : A \to B \quad g : B \to A$$

(iii) $f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$

You do *not* know that f is bijective.

You need to check both identities.

Theorem

$$f : A \to B \quad g : B \to A$$

(iii) $f \circ g = I_B \wedge g \circ f = I_A \implies g = f^{-1}$

You do *not* know that f is bijective.

You need to check both identities.

Use two previous theorems
